

## Mobility Scooter - Car or Pedestrian?

November 24, 2016

The St. Albert Traffic Services want to ensure users of the St. Albert roadways understand how we share our roadways with persons operating mobility scooters or motorized wheelchairs.

By definition, a mobility scooter is a device used to transport, in a forward seated position, a person with a physical disability.

Individuals operating these scooters are afforded the same rights and privileges of a pedestrian. In turn, all rules that apply to pedestrians also apply to users.

As motorists and pedestrian alike, we all play a role in keeping our city roadways and sidewalks safe.
